```

NOTE: This record contains 62 individual

sequencing reads that have not been sequencing reads that have not been sequencing. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone that the sevent that

be the record is updated, the accession number will 10406 11114: contry of the control of th preserved. 20006 20106 16775 16874: gap of 16875 17545: con 9612 1030 10306 10405: 20828 18342 18441: 17546 17645: 17646 183 15974 16073: 14352 14451: 16074 1495 1594: gap of 1595 2314: co 9512 9611: 4680 4779: gap of 4780 5453: cor 3902 4001: 682 781: 782 1 7066 7165: 100 bp 100 8005: gap of 100 bp 100 bp 1710: contig of 705 bp 11 8810: gap of 100 bn 1 9511: contic 2314: contig of 7 15 2414: gap of 100 5 3097: contig <2 0 8 3107 5453: contig of 674 k 5553: gap of 100 bp 6250: contig of 697 k 15253: 22536: 21722: 20927: 20105: 19266: 3197: 23336: 18341: cr July 1 18341: cr July 1 1441: cr July 1 .8441: gap of 100 bp 19166; contig of 725 bp 1 9266; gap of 100 bp 20005; contig of 739 bp 1 0105; gap of 100 bp 105; gap of 100 bp 1027; gap of 100 bp 10927; gap of 100 bp 10027; gap of 1002 100 bp

                                                                                                                                                                                                                                                                                                                                                                                                                                                       Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Industrial Property (A) the poly (A)+ RNA was decapped with tabacco acid pyrophosphatase (TAP) and ligated with DNA-RNA linker including EcoRI site by treatment of T4 RNA ligase. The first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Toploff by electroporation method. After analyzing and sequencing about 2,000 - 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and N(dT)14 as 3' primer. The PCR products were used as template for synthesis of biotinylated single stranded RNA by in vitro transcription reaction. The synthesized RNA probes were hybridized with antisense single stranded cDNAs prepared from original liberary and incubated with avidin gel. After removing DNA-RNA hybrids by centrifuge, the subtracted cDNA libraries were constructed by transformation of the remaining DNA into competent cells E. coli Toplof, with electroporation method."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note-*Organ: nervous_normal; Vector: puc18; Site_1: SmaI; Site_2: SmaI, A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196.716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions.*

                                                                                                                                   The present sequence represents the antisense cDNA sequence of human tumnour rejection antigen RUR-1. The present sequence is the antisense strand of a ubiquitously expressed gene. The antisense strand codes for a polypeptide which is preferentially expressed in tumnour samples and tumnour-derived cells lines. The polypeptide is unrelated to any TRAP protein. The sequence was isolated from a renal cell carcinoma line LB9211-RCC. The RUR-1 nucleic acids and polypeptides can be used for diagnosis, prognosis or treatment of a disorder characterized by the expression of a RUR-1 antisense cDNA molecule or an expression product, such as cancers, e.g. renal call carcinoma, colorectal carcinoma, melanoma, sarcoma or leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         540

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scierosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,

                                                                                                                                                                                                                                                                                                                                                                                                                                                           ubiquitously expressed gene. The antisense strand of the present sequence encodes tumour rejection antigen RUR-1. The antisense strand codes for a polypeptide which is preferentially expressed in tumour samples and tumour-derived cells lines. The polypeptide is unrelated to any TRAP protein. The antisense sequence was isolated from a renal cell carcinoma line LB9211-RCC. The RUR-1 nucleic acids and polypeptides can be used for diagnosis, prognosis or treatment of a disorder characterized by the expression of a RUR-1 antisense cDNA molecule or

The present sequence represents an expressed sequence tag (EST) which overlaps the antisense CDNA sequence of human tumour rejection antigen RUR-1. The RUR-1 antisense sequence is the antisense strand of a ubiquitcously expressed gene. The antisense strand codes for a polypeptide which is preferentially expressed in tumour samples and tumour derived cells lines. The polypeptide is unrelated to any TRAP protein. The RUR-1 sequence was isolated from a renal cell carcinoma line LB9211-RCC. The RUR-1 nucleic acids and polypeptides can be used for diagnosis, prognosis or treatment of a disorder characterized by the expression of a RUR-1 antisense cDNA molecule or an expression product, such as cancers, e.g. renal cell carcinoma, colorectal carcinoma, melanoma, sarcoma or leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  note: although the present sequence is mentioned in claim 8, it is not specifically claimed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DXXXI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                        The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, lumunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system inseases, such as localised neuropathies and central nervous system diseases, such as lateral society, and Shybrager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and crows of the activity, arthritis and inflammation, leukaemias and crows of the activity, arthritis and inflammation, leukaemias and crows of the activity, arthritis and inflammation, leukaemias and crows of the activity, arthritis and inflammation, leukaemias and crows of the activity arthritis and inflammation, leukaemias and crows of the activity arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                   Wang D;

The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a (sub-)transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises cerveral oligonucleotides, each capable of hybridising selectively to a several oligonucleotides, each capable of hybridising selectively to a cerver of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The oligonucleotide libraries are useful for detecting mRNAs from a blological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal conscriptions. The libraries may also be used as specialised minical conscription of detect transcripts of a sub-transcriptome and in particular biological or pathological state, and so allowing the detection of tissue and pathology-specific genes such as those genes only expressed in specific tissue under a specific pathological condition; to detect developmental specific genes; and to detect RNA cranscripts and splice variants of a transcriptome of a pattient suffering from a particular disorder. ABN27253 to ABN59589 represent coligonucleotide sequences from rats, humans and mice, which are used in the exemplification of the present liventic format directly from WIPO condition in the was obtained in electronic format directly from WIPO condition in the was obtained in electronic format directly from WIPO condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               selectively hybridize to mRNAs transcribed from a transcription unit of a genome, useful for detecting tissue-, pathology-, and

Human cDNA clone HISBL55 encoding cancer related protein 21.
              04-JUL-2001
 AAC98773 to AAC99231 encode the human pancreatic cancer associated proteins, called pancreatic cancer antigens, given in AAB54008 to AB54666. The human pancreatic cancer antigens have cytostatic, cauched human pancreatic cancer antigens have cytostatic, cauched the human pancreatic cancer antigens have cytostatic, cantraceptive, nootropic, immunomodulatory, relaxant, contraceptive, gynaecological, cardiant and antiinflammatory activities, and can be used for in gene therapy. The polynucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the proteins can be identified. The pancreatic cancer antigens can be used to design nucleic detect, treat or prevent pancreatic disorders, especially cancer. Agonists and antagonists to the antigens can be screened for. The pancreatic cancer antigen polynucleotides can be used to design nucleic and diagnostic methods. The proteins can be used to design nucleic and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to treat or prevent neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal or prevent ceproductive disorders. AAC99234 ond AAB54467 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The sequence encodes a novel Human cancer related protein. The polynucleotides and polypeptides are useful for preventing, treating or ameliorating a medical condition in e.g. humans, treating or ameliorating a medical condition in e.g. humans.

The color of the color of cancer (e.g. daditive or preservative to polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The polynucleotide are useful for chromosome identification. The nucleic acids, protein, antibodies, agonists and antagonists are useful in the diagnosis, treatment and prevention of cancer (e.g. cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital), immune disorders (e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis, acquired immunodeficiency syndrome, AIDS), cardiovascular disorders such as myocardial ischaemias, wound healing, neurological disorders such as myocardial ischaemias, wound healing, neurological and epilepsy) and infectious diseases uch as viral, bacterial, fungal and parasitic infections. Numerous examples of each type of disorder are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Twenty nine nucleic acid molecules encoding human cancer associated proteins, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases
